11	ID	BOD	Otter	Full Suppression	6 mi. E of Riddle, ID	2,427	5,573	95%	7/19/18	Type 3 IC D. Konrad	0	2	1	0	0	None	Sage Grouse, grazing allotments, Duck Valley reservation
12	NV	EKD	Stag	Full Suppression	17 mi. NW of Deeth, NV	4,397	0	95%	7/19/18	Type 4 IC Paul Naman	0	0	0	0	0	None	Sage Grouse

***** Notes of Significance *****
 Fires highlighted in yellow have submitted a final ICS-209

Date: 7/18/2018

[illegible]

Evening Brief

Date: Wednesday July 18, 2018

Weather Summary

High Risk for Lightning Friday NE Nevada...Nrn UT...Far Srn ID

Showers and thunderstorms will be confined to the southern half of the Great Basin Thursday. Storms will be mostly wet in the far southern areas, and a mix of wet and dry thunderstorms across central UT and NV. Hot and dry conditions will exist across the northern half of the area today, impacting most of ID, and northern NV and UT. Haines Indices will also be high in Nrn NV/UT and ID, where there is ongoing large fire activity.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	3	Moderate Initial Attack Activity
National	3	New Fires and Acres: 27 fires for 962.6 acres; 9,535 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisories have been issued for [Nevada](#) and [Utah](#)

Fire Potential

Sagebrush live fuel moisture values are still below normal across Utah, and near record lows for a small area of far western Idaho. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for mid-July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over southern Nevada, the AZ Strip and southern Utah, with most areas below the 50th percentile. Over the rest of northern and western Utah, ERCs remain seasonably high, between the 70th - 90th percentiles. Continued higher humidity and scattered wetting rains into the weekend over the southern and eastern portions of UT/NV and the AZ Strip will minimize any ignitions from growing rapidly.

ERCs are on the rise over western and northern Nevada into Idaho as dry weather continues, with current ERCs in the 50th - 80th percentile. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture across portions of western/northern Nevada now below critical levels and contributing to fire spread.

Resources:

Aviation within the Great Basin

- 22 SEATs
- 9 Type 1 Helicopters / 9 Committed
- 7 Type 2 Helicopters / 7 Committed
- 20 Type 3 Helicopters
- 3 LATs

Crews Committed within the Great Basin

- 13 IHCs Committed / 0 Available
- 28 T-2 IAs Committed / 6 Available
